

What You **Say** is What You Get

Handsfree Coding in 2025

ICRAIS 2025, Mauritius

Sept. 12, 2025

Wolle

Videos & Slides Available at <https://wolle.science>

It's **Simple**, Really!

The requirements:

- ✓ **Microphone:** Every notebook has one!
- ✓ **Speech Recognition Software (SR):** Included in Windows since 2007!
- ✓ **Voice Command Execution:** Available in every SR software!

Let Me Just Show You How **Easy** It is

Where's the **Challenge**?

Where's the **Challenge**?

WSR, Dragon, ...

- **Automatic Speech Recognition (ASR):** optimized for natural languages
 1. Signal processing extracts features from audio recording
 2. Acoustic model recognizes phonemes
 3. Language model finds a matching sequence of words:
 - Default: Every utterance is interpreted as (spoken) text
(Commands only through special keywords)
- **Voice Coding:** optimized for actions & programming languages
 - Default: Everything is interpreted as a command
(Natural language through special keywords, e.g. `say <utterance>`)

Talon, Dragonfly ...

Handsfree Coding: How It **Actually** Looks

```
_1to10 = IntegerRef("1to10", 1, 11)
_0to12 = IntegerRef("0to12", 0, 13)
_0to60 = IntegerRef("0to60", 0, 60)
_0to100 = IntegerRef("0to100", 0, 100)
_0to1000 = IntegerRef("0to1000", 0, 1000)
_0to3000 = IntegerRef("0to3000", 0, 3000)

def T(s, pause=0.00001, **kws):

Using Dragonfly!

Tavis Rudd. Using Python to Code by Voice,
PyCon US (2013)

Outline: What This Talk is Going to Cover

1

My Personal Background

As data engineer & scientist, I
use handsfree coding every day.

2

Demo & Usage Examples

Handsfree coding is awesome
and can be useful for everyone!

3

Setup & Best Practices

No-cost base setup with optional
upgrades (e.g. for eye tracking).

4

How to Get Started

Videos, blogs, articles, support &
community – engage now!

My Job is Data Science

I Am **Wolle**

I'm a data guy, not an ASR or HCI expert!

Wolfram Wingerath
Data Science

Research:

- Stream Processing
- Real-Time Databases
- NoSQL & Cloud Systems
- ...

Practice:

- Web Caching •
- Big Data Analytics •
- Anger Management •
- ...

Look,
No Hands!

Basic Voice Control

- **Symbols, Modifiers & Navigation:**

Symbols, Modifiers & Navigation:

What you say

What you get

○ Numbers, brackets, etc.: one space air bat shift one → 1_ab!

- **Spelling** through a phonetic alphabet:

- **NATO alphabet:** alpha bravo charlie delta echo → abcde

- **Optimized alphabet:** air bat cam drum each → abcde

- **Command Management** for efficiency, e.g.:

- Chaining: `{paren close paren}{go left}{say hi} → (hi)`
 1.) type: `()` 2.) move cursor: `←` 3.) dictate: `hi`

- **On-the-fly grammar prototyping** through Python live reloading!

A man in a light blue business shirt and dark tie is balancing a unicycle on a tightrope. He is also juggling four red balls. The background features a misty mountain range and a pine tree on the left. The entire image has a blue overlay.

Live Demo

Handsfree Coding

- **Context-dependent behavior**, for example:
 - **C#:** `funky test funk` → `private void testFunk()`
 - **JavaScript:** `funky test funk` → `function testFunk()`
- **Intuitive IDE shortcuts** such as
 - "run code" instead of `<shift-f10>`
 - "find usage" instead of `<ctrl-alt-f7>`
- **Powerful templates**, e.g.:

```
action(user.code_state_if):  
    insert("if () {}")  
    key(left enter up end left left left)
```

Handsfree Coding: Talon

```
1  import React from 'react';
2  import styled from 'styled-components';
3
4  import Icon from '@components/Icon';
5
6  function IconButton({ icon, children }) {
7    return (
8      <Wrapper>
9        <Icon icon={icon} />
10       {children}
11     </Wrapper>
12   );
13 }
14
15 const Wrapper = styled.button`
16   background-color: var(--color-primary);
17   font-size: 2rem;
18   cursor: pointer;
```

Handsfree Coding: Talon + **Cursorless**

- Available on GitHub: github.com/cursorless-dev/
- VSCode extension
- Spoken language for **structural code editing**
 - Decorates every token on screen with a **mark**
 - tokens can be selected via combination of mark and **scope**
 - **actions** operate on the specified tokens

○ Example:

<code>bring</code>	<code>call</code>	<code>vest</code>
action	scope	mark

(copy the function call with the marked „v“ to where my cursor is)

Handsfree Coding: Talon + Cursorless

```
const foo = 0;
const bar = "hello";

makeEven(foo, true + 1);

function makeEven(increase: number, num: boolean = false) {
  if (num % 2 !== 0) {
    return increase ? hello + 1 : num - 1;
  }

  makeEven(foo, true + 1)

  return num;
}

const numbers = {
  ([one]): "one",
  two: "two",
  ([three]): "three",
  four: "four",
  five: "five",
  ([six]): "six",
  seven: "seven",
  eight: "eight",
};

export {};
```

(moving code around)

Handsfree Coding: Talon + Cursorless

```
const foo = 0;
makeEven(foo, true + 1);

function makeEven(increase: number, num: boolean = false) {
  if (num % 2 !== 0) {
    return increase ? hello + 1 : num - 1;
  }

  return num;
}

const numbers = {
  one: "one",
  two: "two",
  three: "three",
  four: "four",
  five: "five",
  six: "six",
  seven: "seven",
  eight: "eight",
};

const bar = "hello";

export {};
```

(swapping arguments)

Handsfree Coding: Talon + **Cursorless**

```
const foo = 0;
const bar = "hello";

function makeEven(num: number, increase: boolean = false) {
  if (num % 2 !== 0) {
    return increase ? hello + 1 : num - 1;
  } const bar = "hello";

  return num;
}

const numbers = {
  one: "one",
  two: "two",
  three: "three",
  four: "four",
  five: "five",
  six: "six",
  seven: "seven",
  eight: "eight",
};

makeEven(foo + 1, true);

export {};
```

```
def hello_world(arg: str):
    pass
```

(selecting semantic entities)

Handsfree **Browsing**

+ **Vimium** browser extension: vimium.github.io/

Example navigation without keyboard:

1. Show clickable links by pressing the `⌘` key
2. Press `s j` keys to click on Vimium link

+ Natively compatible with tools like **Talon**

- Simplify shortcuts with easy-to-remember utterances
- Optional: eye tracking + noise control to select links with your gaze

+ **Rango** browser extension for Talon: github.com/david-tejada/rango

Handsfree Browsing: Vimium

The screenshot shows a Google search for "Talon Voice". The search bar contains "Talon Voice" and the Google logo is on the left. The search results show approximately 16,500,000 results in 0.46 seconds. The first result is "Talon Voice" from talonvoice.com, with a description: "for Windows (portable zip) • Changelog • Documentation • License Agreement. Powerful hands-free input. Voice Control. talk to your computer. Noise Control." The second result is "Coding with voice dictation using Talon Voice - Josh Comeau" from joshwcomeau.com, dated 09.12.2020, with a description: "I currently use Talon Voice, a tool built specifically to help software developers work without using their hands. Talon has a free public version, ...". The third result is "Getting Started | Talon Wiki" from talonwiki.org, with a description: "Talon uses a speech recognition engine that translates voice audio to text. There are multiple options for speech engines, and you will need to choose one." The fourth result is "Talon · GitHub" from github.com, with a description: "Talon. Next-generation voice control and alternate input. https://talonvoice.com ...". The search bar has several Vimium shortcuts overlaid: "SG" for search, "D" for close, "AD" for address bar, "SD" for search, "AA" for address bar, "E" for all, "AE" for videos, "SE" for shopping, "F" for news, "AF" for images, "SF" for more, "G" for settings, and "H" for search filter. The "Videos" tab is selected at the bottom.

Getting Started with Eye Tracking

UTTER COMMAND: WHY I REWROTE MY ENTIRE GRAMMAR

SEPTEMBER 4, 2018 JAMES 7 COMMENTS EDIT

For years, I've been approaching speech recognition like a backend engineer: I have a flexible coding style for managing my grammars, I've implemented a lot of functionality, and I've added some helpful integrations. But embarrassingly, until recently, I hadn't put much thought into the User Experience. This all changed after I received an email from Kim Patch, the author of [Utter Command](#), a set of extensions to Dragon that has been around for decades.

Kim offered to talk over the phone, and we ended up chatting for over an hour. Kim was full of insightful observations how to design grammars. I quickly realized that my own grammars were a mess: a mishmash of scraps I picked up from Tavis Rudd's video, commands I found in GitHub repositories, and plenty of stuff I had made up on my own. This mess was costing me in multiple ways. Adding a command to my grammar was always an ordeal, because I had to come up with some unique identifier (frequently a non-English word), check to make sure it didn't conflict with anything, and then do my best to remember that word or phrase. In practice, this often meant recognition errors, or pauses as I tried to remember what I had used for my commands. All this discouraged me from adding more commands.

Kim's work showed that there is a Better Way. I'm happy to say that she's done a phenomenal job writing her ideas down, too, so you don't have to all go find Kim's phone number. I encourage you to explore her [website](#), but make sure you don't miss [Human-Machine Grammar - The Rules](#). These 16 guidelines contain her biggest ideas — although it's also very helpful to see exactly how she implemented them. In her own words:

aimed at keeping the speech interface predict. These guidelines cut out alternate the entire set of commands, making it command should be worded.

Available for
Dragonfly as well
as Talon!

Snappy Noise Control With **Parrot**

- Available on GitHub: github.com/chaosparrot/parrot.py
- Noise-controlled actions with latency <50ms
- Workflow
 - (1) Record sounds
 - (2) Train model for recognition
 - (3) Map sounds to actions
- Compatible (and recommended in combination with) with other tooling:
 - Often used with Project IRIS (eye tracking)
 - Can be used to produce **Talon-compatible** models

Custom noises for
your Talon grammar!

Handsfree Gaming: **Noise** Recognition

Cian Dowd. [Speed Runners Hands-Free](#),
YouTube (2021)

Eye Tracking & Noise Recognition

- **Calibration** for adjusting your eye tracker to your current position
- **Noises** for actions (e.g. clicking & right-clicking):
 - Extremely low latency (<50ms)
 - Talon currently supports `*pop*` & `*hiss*`
 - Custom noise models available via Parrot
- **Different Modes** for convenience:
 - Zoom: (1) `*pop*` for zooming, (2) `*pop*` for clicking
 - Head tracking: eye gaze (jumps) + head movement (adjustment)
- **Debug** mode & camera overlay

github.com/chaosparrot/parrot.py

Handsfree **Gaming**: Head + Eye Tracking

Handsfree Gaming: **Noises + Eye** Tracking

Handsfree Gaming: Facial Actions

Handsfree **Gaming**: Eyes + Face + Voice/Noise

[wolle.science/twitch](https://www.twitch.tv/wolle.science)

A professional microphone is positioned in the foreground, slightly off-center. The background is a blurred computer monitor displaying a webpage with a grid of images. The entire image has a blue color overlay.

The Base **Setup**

Popular Handsfree Coding **Stacks**: Overview

*Facial Action Handling
Please note that this overview is NOT complete: On every level, there are MANY other options!

💡 This overview was inspired by:
<https://dictation-toolbox.github.io/dictation-toolbox.org/> (accessed: January 4, 2021)

Upgrades & Add-Ons

Supplementary Equipment

- **High-quality (!) microphone:** Get one now!
 - A wired (or good Bluetooth!) headset
 - Steno-mask: For noisy places & special looks
 - XLR mic for maximum accuracy

Sennheiser MB Pro 1/2

DPA 4188

Sennheiser EW 112P G4 E-Band

- **Foot pedal for push-to-talk**
- **Eye tracker:** Tobii 4C & 5 supported by Talon
 - Multi-monitor support coming (?)

Multi-Computer Setup

A person wearing a red top and blue sneakers is tripping over a banana peel on a paved surface. The scene is overlaid with a dark blue filter. The text 'Pitfalls & Challenges' is written in white on the right side of the image.

Pitfalls & Challenges

Recognition **Accuracy** Issues

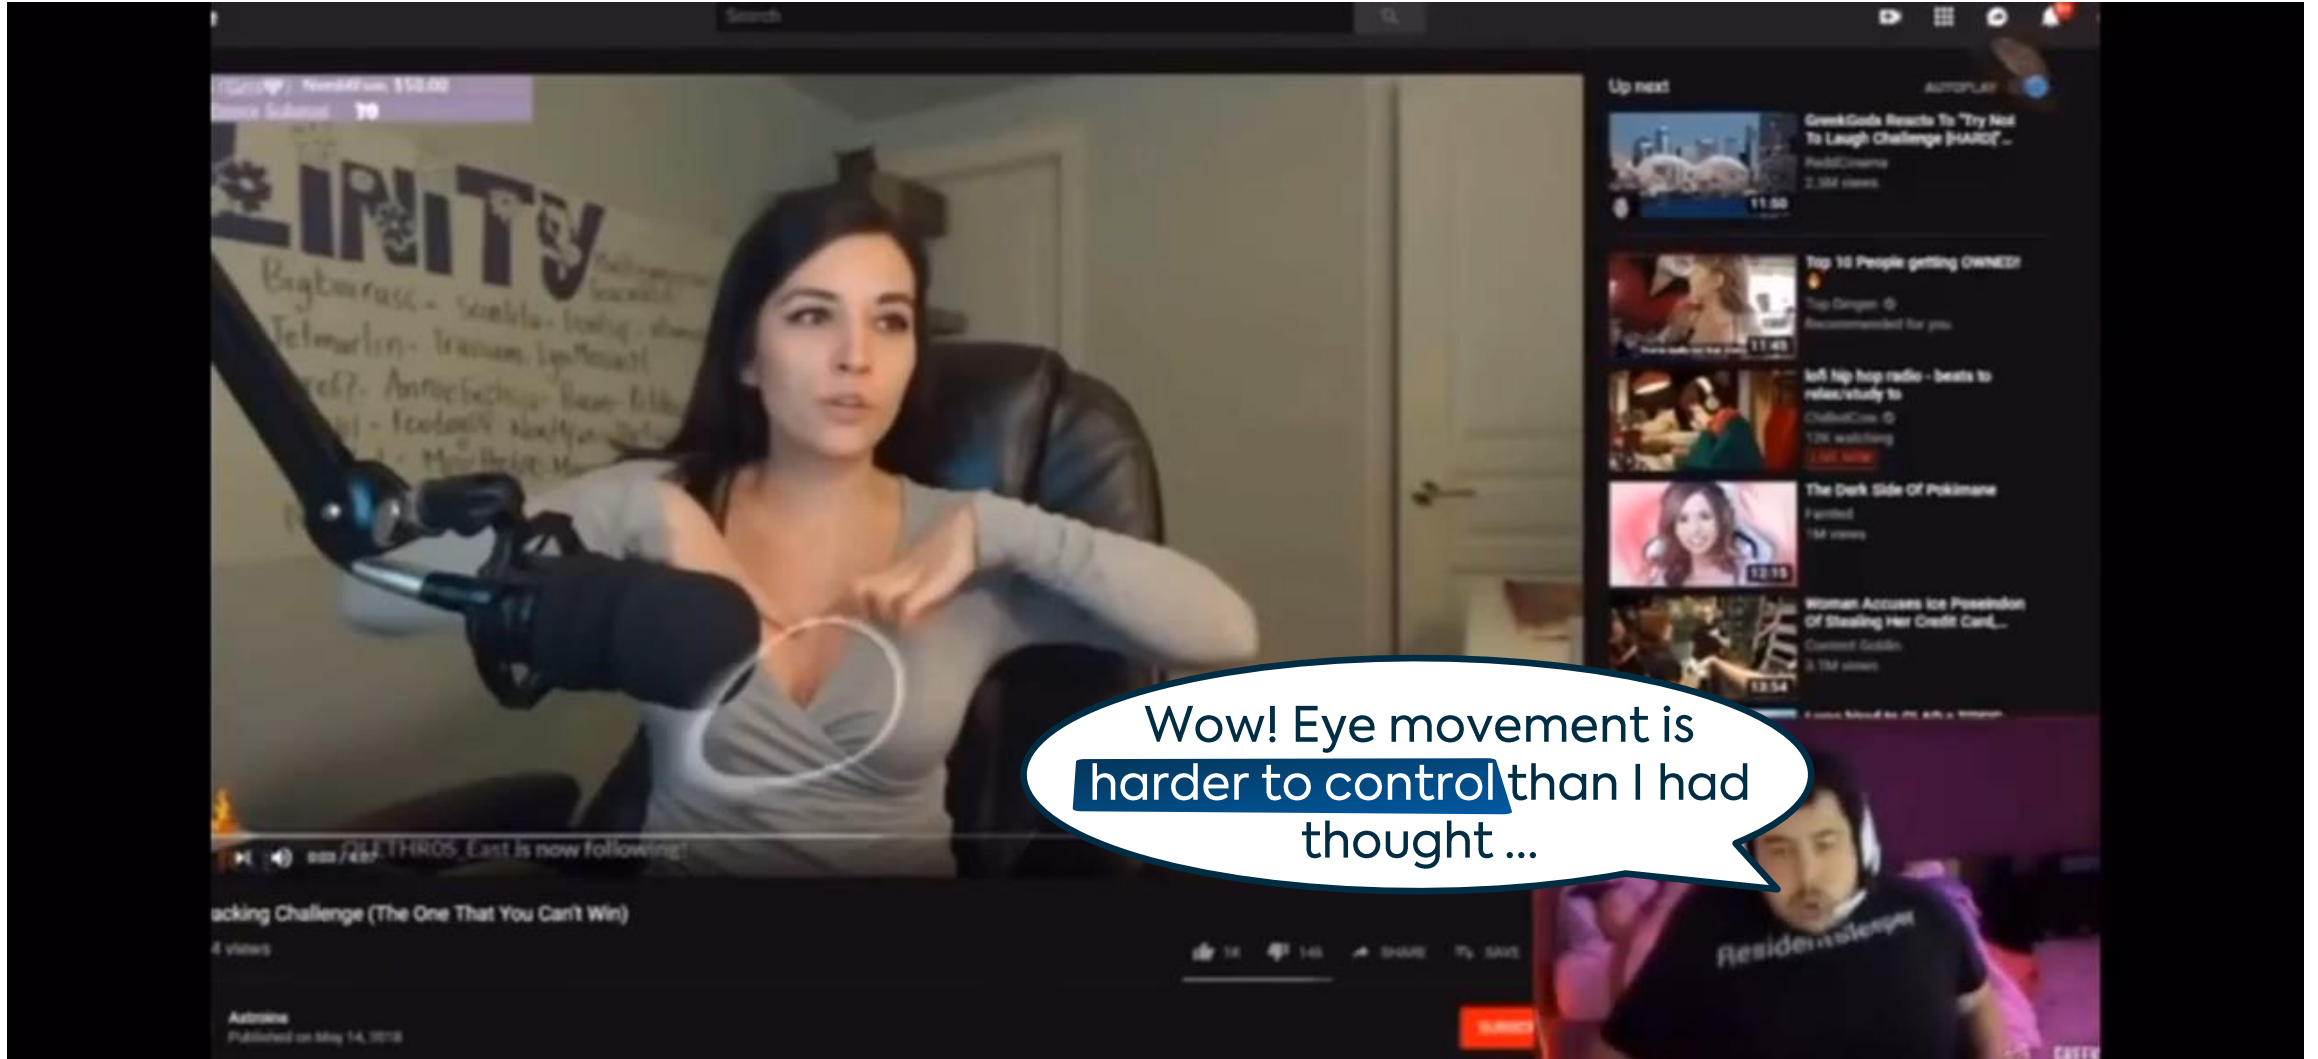

- **Microphone** determines accuracy!
 - *Build quality*: built-in < gaming headset < stage mic
 - *Positioning*: consistent, close to your mouth, away from all noise
 - *Mixed bag*: Noise canceling via hardware or software (e.g. RTX Voice)
- **Environment**: Minimize noise for you and annoyance for others!
 - Suspend ASR / mute mic accordingly (e.g. via push-to-talk pedal)
- **Homophones** should be avoided, e.g. through:
 - Grammar optimization to avoid ambiguity
 - Clear pronunciation

Potential **Privacy** Issues

- **Watch Your Tongue:** Passwords & confidential info may be leaked ...
 - ... through plain acoustics (beware *eavesdroppers!*)
 - ... as they are stored your *command history!*
 - ... to involved third parties (e.g. with *Web Speech*)
- **Watch Your Transmitter:** Wireless solutions are often not encrypted!
- **Watch Your Eyes:** Your eye movement may give away a lot
 - perhaps avoid continuous eye tracking ;-)

<insert eye tracking challenge joke here>

Potential Privacy Issues

Greekgodx. [Eye Tracking Challenge](#), Twitch (2019)

Workflow & Anger Management Issues

- **Beware the Trolls:** Having an audience generally does not help!
 - Prepare to hear „Format C“ from your colleagues a lot
- **Keep your calm:** Shouting at the computer will not help, either!
 - Stay in your neutral voice, even when raging inside ...
- **Avoid Voice Strain:** Find a comfortable way to speak A LOT!
 - e.g. use your natural voice & drink a lot of tea
- **Command chaining:** Anticipate what is going to happen!
 - Practice, practice, practice!

General Issues

- **Multilanguage support** is still in its infancy
 - Non-English language models all have their problems
 - Designing command libraries for different languages means effort
- **Complex setup** with many moving parts:
 - Random stuff sometimes just happens, get used to it!
 - Fallback to manual input sometimes necessary ...
- **MACHINE LEARNING!!!**
 - Models often reflect typical issues (data bias, data quality issues, ...)
 - Sometimes you have to just hope for the best ...

Model Issues

"short context" / vocabulary tests. It places somewhere between Whisper Small and Whisper Base on those tests.

1

32

Ryan Hileman @linuxbochs · 27. Sep.

Whisper was painfully slow compared to the other models tested. I achieved much higher throughput when running my GPU tests on the largest Talon 1B model and Nemo xlarge (600M) model than any Whisper model, including Whisper Tiny (39M).

1

2

42

Ryan Hileman @linuxbochs · 27. Sep.

Whisper output "feels" great. It is very good at producing coherent speech, even when it is completely incorrect about what was said. While analyzing some "worst case" outputs (highest error %), I saw an audio clip of only the word "partnerships" transcribed by Whisper Large as:

What you say

What you get

Ryan Hileman @linuxbochs · 27. Sep.

"That's the end of the video. Thank you for watching. Lots of heat, December. Keep writing your comments below for new videos and feel free to contribute. If you have any questions, feel free to ask away, or make comments, post any of your comments. I'll see you next week."

Why This is Still Worth All the **Hassle**

Productivity

- Speed up input-heavy tasks
- Faster navigation through easy-to-remember shortcuts

Convenience

- Intuitive interfaces
- Relieve your hands

Accessibility

Compensate handicaps:

- Injuries (e.g. broken hand)
- Repetitive stress injury (RSI)
- Cubital Tunnel Syndrome
- ...

General Awesomeness

- Talk to your computer!!!

It's **Awesome!**

A person with long hair is seen from behind, looking out at a harbor. In the background, several large cranes are visible against a twilight sky. The water in the foreground is dark and reflects some light. The overall scene is dimly lit, with a blue and purple color palette.

Helpful Resources & **Outlook**

Tooling **Recommendations** (Incomplete!)

- **Talon** (Free of Charge): talonvoice.com / talon.wiki
 - Voice coding for Win / Linux / Mac!
 - Starter Grammar (English): github.com/knausj85/knausj_talon
- parrot.py (noise control): github.com/chaosparrot/parrot.py
- Cursorless (code editing for VSCode): github.com/cursorless-dev
- Rango (handsfree browsing): github.com/david-tejada/rango
- Paid Upgrades:
 - Talon Premium Support: patreon.com/join/lunixbochs
 - Dragon Speech Recognition: nuance.com/dragon/

Alternatives: **Speech** Recognition

- Speech Recognition
 - WSR (Windows Speech Recognition): Built into Windows
 - Kaldi: github.com/kaldi-asr/kaldi
 - Vosk (ASR on mobile devices!): github.com/alphacep/vosk-api
 - Web Speech API (compatible with Talon through Chrome or Firefox)
- Scripting:
 - NatLink: sourceforge.net/p/natlink/
 - Dragonfly: github.com/dictation-toolbox/dragonfly
 - Caster: github.com/dictation-toolbox/Caster
 - Vocola (Voice Command Language): vocola.net

Softwareentwicklung ohne Maus und Tastatur

Sprechen ist das neue Klicken

Dr. Wolfram Wingerath, Michaela Gebauer

Für die Bedienung des Computers brauchte man viele Jahre Maus und Tastatur – heute kann man mit Sprache, Gestik und Mimik sogar programmieren.

zung des Computers ganz ohne Einsatz ihrer Hände.“

Wolle ist 33 Jahre alt, Data Engineer und erprobt seit mehr als zehn Jahren Eingabemethoden zur Softwareentwicklung ohne Maus und Tastatur. Inzwischen setzt er fast ausschließlich auf Handsfree Coding, da er damit effizienter arbeitet. „Dadurch muss ich mir keine kryptischen Shortcuts mehr merken und kann ganz bequem mit Sprache, Geräuschen, Mimik oder Gestik den Computer und die Programme steuern“, sagt er.

Beim Handsfree Coding spielt das Voice Coding eine zentrale Rolle. Hierbei wird Quellcode per Spracheingabe erstellt. Voice Coding ist jedoch nicht mit handelsüblicher Software zur automatischen Spracherkennung (Automatic Speech Recognition, ASR) vergleichbar. Es gibt zwar einige offensichtliche Parallelen zum Diktieren von Textnachrichten. Mit Standardsoftware zur Spracherkennung kann man aber nicht ohne Weiteres effizient programmieren, da ASR auf die Interpretation und Synthese einer konkreten natürlichen Sprache ausgelegt ist. Sie verwendet dafür jeweils spezifische Modelle, Grammatiken und Optimierungen bei der Ausgabe, etwa, wenn sie automatisch Satzzeichen einfügt oder Substantive großschreibt. Bei typischer ASR-Software sind Befehle stets mit einem Schlüsselwort einzuleiten und durch Sprechpausen abzuschließen. Während sich so einfache Tastenaktionen umsetzen lassen – etwa mit der Aussage „press Enter“ zum Drücken der Eingabetaste –, ist die Ausführung von komplexen Aktionen oder Aktionssequenzen eher beschwerlich und ineffizient.

Wolfram Wingerath, Michaela Gebauer: [Sprechen ist das neue Klicken](https://wingerath.cloud/2021/ix), iX 9/2021 (<https://wingerath.cloud/2021/ix>)

Closing Recommendations

- **Keep it simple:** Prioritize ease-of-use over efficiency at the start (in particular: get used to an existing grammar before optimizing it)
- **Keep it reasonable:** Try to find use cases that make sense for you (e.g.: I'm not giving this talk handsfree, since I can use my index finger)
- **Keep it in mind:** Handsfree coding might save you one day (revisit this talk when you struggle with RSI, broken hand, etc.)

Thanks! So **What Now?**
